

IBSBLE104

FSE low and high voltage – With first aid (Adaptive e-learning + practical)

Duration 3 hours + 120 min. e-learning

Target group This course is designed to provide thorough training for professionals (Electricians and other professionals) involved with electrical installations, ensuring they are well-versed in legal requirements and prepared to administer first aid in emergencies.

Prerequisites There are no prerequisites for this course. However, it is required to be repeated annually to ensure ongoing compliance and proficiency.

Objective Equip participants with the skills to safely work on electrical installations, including first aid. This course complies with the regulation on safety during work on and maintenance of electrical installations (FSE) §7.

Practical session consists of:
First Aid Preparedness - Life-saving first aid including treatment of electrical injuries.

E-learning consists of:
Introduction
FSE Regulation
Roles and Responsibilities
Personal Protective Equipment (PPE)
Electrical Tools
Planning of Electrical Installation
Work Environment
First Aid for Electrical Injuries

Contents This FSE course is designed as blended learning, consisting of a digital part and a practical part. The e-learning covers laws and regulations related to FSE, while the practical part includes relevant first aid training.
