- LO12: Describe the safe operation of power tools
- LO13: Explain the prevention of hazards through maintenance
- LO14: List the safety rules for the operation of power tools
- LO15: Explain how operators control risk in relation to power tool operation

Contents

This course is available in the following languages: US English; Turkish

This course provides an awareness of how to safely use portable hand tools. You will learn about the associated legislation and types of tools commonly used in the oil & gas and energy industry, looking in detail at both manual and powered hand tools.

You will gain an understanding on the potential hazards and associated injuries, along with practical advice and knowledge on the rules and preventative measures that you should take to reduce risk and operate safely in the workplace.

Employers should provide additional training when a new hazard/procedure/condition or piece of equipment is introduced into the workplace or "unscheduled" refresher training is recommended as directed to address inadequacies in knowledge and to address unsafe acts/deviations from procedures.

Exam The assessment is taken during the course and is within the expected duration.
