

Dry CA-EBS Initial Deployment 5902

Duration	1 - 1.5 Hours
Target group	Compressed Air Emergency Breathing System (CA-EBS) Initial Deployment training is for personnel that are issued with Compressed Air Emergency Breathing System (CA-EBS) whilst travelling to work by helicopter and may be required to use a CA-EBS in the event of an emergency
Prerequisites	<p>Training entry and medical entry requirements must be met. Learners must possess a valid BOSIET/FOET/HUET/T-BOSIET/T-FOET/T-HUET (or Industry agreed equivalent) certificate prior to attending the OPITO Compressed Air Emergency Breathing System (CA-EBS) Initial Deployment Training programme.</p> <p>Training activities contained within this Product may include physically demanding and potentially stressful elements. All personnel who participate in such activities must be capable of participating fully. Trainees will undergo a medical screening by completing an appropriate medical declaration form at center.</p>
Objective	The objective of the CA-EBS training is to ensure that the learner gains the required knowledge and understanding of the particular hazards and properties of a Compressed Air Emergency Breathing System (CA-EBS) and appropriate practical emergency response actions to take should the requirement for emergency deployment arise.
Contents	<p>This course covers the following contents:</p> <ol style="list-style-type: none">1.The rationale and use of compressed air emergency breathing systems in helicopter emergency situations, including the fundamental differences between re-breather and compressed air systems (technology and use).2.The hazards associated with compressed air emergency breathing systems.3.Use of the Compressed Air Emergency Breathing System (CA-EBS).
Exam	To achieve the Compressed Air Emergency Breathing System (CA-EBS) Initial Deployment Training Standard the learner will need to complete the 1 mandatory unit.
