

First Aider Offshore (DGUV)

Duration 3 Days

Target group Employees in the wind industry who work offshore at sea and have to provide qualified first aid in an emergency, especially if the rescue service and the emergency doctor are not available on short hand and take some time to arrive.

Prerequisites Basic First Aid certificate (DGUV) not older than 6 months (included in our 3 days course)

Objective Emergencies of all kinds also occur when working in offshore wind farms. Fall injuries, electrical accidents or even heart attacks - serious emergencies can happen even where the rescue service is not within minutes of the site. Therefore, on-site personnel must be trained to provide the injured person for a longer period of time. We train this staff with the necessary knowledge of extended first aid. We also train the participants of this course in the tactical tactics and in the practical application of the acquired knowledge in practice-oriented practice scenarios.
Only those who acquire the necessary medical knowledge and know their equipment can provide qualified first aid. This course covers the basic training content of the First Aid Basic

Contents Course as well as the course content of the First Aid Offshore according to DGUV.
The course is conducted in accordance with DGUV guidelines.

Exam Practical examination acc. DGUV.
