

## (L-AUS) Low Voltage Work: DS/EN 50110

**Duration** 135 Minutes

**Target group** Working on or near electrical installations.

**Prerequisites** No prerequisites are required to sit this course.

**Objective**

Module 1 -  
 Section 1 – Introduction to Low Voltage Work Under Voltage, L-AUS  
 LO1: Describe the history of safety within the electrical trade industry  
 LO2: Introduce and summarise Low Voltage Work Under Voltage, L-AUS  
 LO3: Explain the legal framework  
 LO4: Outline the objectives of the DS/EN 50110-1:2013  
 LO5: Identify where the standard applies  
 Section 2 – An Organisation’s Responsibilities  
 LO6: Identify who is responsible according to the standard  
 LO7: Explain an organisation’s responsibilities for overall planning  
 LO8: Explain an organisation’s responsibility for providing training  
 LO9: Define skilled and instructed persons and outline their responsibilities  
 LO10: Explain the meaning of internal management systems  
 LO11: Outline the necessity of conducting risk assessments  
 Section 3 – Common Electrical Hazards and Safety Equipment  
 LO12: Describe injuries that can be caused by common electrical hazards  
 LO13: Identify the purpose of different types of personal protective equipment  
 LO14: Outline and describe the different categories of hand tools suitable for working within electrical installations  
 LO15: Describe the purpose of protection against adjacent live parts  
 Section 4 – Measuring Instruments  
 LO16: Explain the purpose of measuring instruments, and identify the benefits of different types  
 LO17: Explain the safety features of multimeters  
 LO18: Describe the purpose of safety categories and where different categories of measuring instruments can typically be used  
 LO19: Identify risks associated with the practical use of measuring instruments  
 LO20: Explain the benefits and risks of the hold function  
 Section 5 – When Accidents Happen  
 LO21: Explain the importance of knowing first aid  
 LO22: Identify when to carry out CPR  
 LO23: Describe the purpose of defibrillators and how they work  
 LO24: Explain how to place someone in the recovery position  
 LO25: Explain how rescue sticks work  
 LO26: Explain how lifelines work  
 LO27: Identify the correct procedure for reporting accidents

Module 2 -  
 Section 1 – Roles and Responsibilities  
 LO1: Outline the role and responsibilities of the Operations Manager  
 LO2: Outline the role and responsibilities of the Safety Supervisor  
 Section 2 – Safety at the Worksite  
 LO3: Describe the steps that must be taken before work commences  
 LO4: Identify levels of access for different types of installations and personnel  
 LO5: Explain safety precautions to take when operating fuses

---

LO6: Identify safety precautions to take when working on non-insulated overhead lines

Section 3 – Working Methods

LO7: Outline the different types of working methods and associated safety measures

LO8: Identify the steps that must be taken to remove safety measures

LO9: Describe when an installation can be categorised as energised

LO10: Outline safety precautions to consider when carrying out maintenance work

---

## **Contents**

The course is available in the following languages: English; Danish  
The aim of this course is to provide you with a detailed explanation of L-AUS requirements and how to work safely when near electrical installations. The course will also focus on the legal framework, organisational responsibilities, common electrical hazards and safety equipment, measuring instruments and what to do when accidents occur. Following completion of this course you will have learned and have an understanding of low voltage level electrical installations. You will also be able to show an understanding of the safety-related aspects, carry out risk assessment and use and inspect both suitable tools as well as personal protective equipment. This course will give you the necessary training to work with dead installations, live installations and in the vicinity of live installations. In addition, the course includes a basic knowledge of first aid in relation to electrical installations.  
This course is designed in accordance to the European standard EN 50110.

---

## **Exam**

The assessment is taken during the course and is within the expected duration.
