LO9: Identify the safety checks required before work can begin within the

excavation

LO10: Identify safety requirements during excavations

LO11: Describe how to carry out an excavation

LO12: Describe the backfilling procedure

Contents

The aim of this course is to provide you with under-pinning knowledge to help you to understand how excavations are planned, controlled and conducted safely.

By the end of the course, you will be able to define what an excavation is and be able to identify the safe procedures, processes and requirements required for any excavation. You will also be able to describe how to plan an excavation,

how to carry out the excavation and the backfilling process. Employers should provide additional training when a new

hazard/procedure/condition or piece of equipment is introduced into the workplace or "unscheduled" refresher training is recommended as directed to address inadequacies in knowledge and to address unsafe acts/deviations from

procedures.

Exam

The assessment is taken during the course and is within the expected duration.
