

Atmospheric Emissions

Duration 30 Minutes

Target group Oil & Gas Industry

Prerequisites No prerequisites are required to sit this course.

Objective

- LO1: Distinguish common operational activities and associated atmospheric emissions
- LO2: Describe the potential impacts that emissions can have on the environment
- LO3: Identify recent trends and statistics of atmospheric emissions in the UK Oil and Gas industry
- LO4: Recognise relevant national, European and international legislation
- LO5: Describe the permit process for controlling atmospheric emissions
- LO6: Explain requirements for reporting and monitoring atmospheric emissions
- LO7: Describe roles and responsibilities associated with controlling and reducing emissions

Contents

The course is available in the following languages: English; Norwegian; Indonesian; Bahasa Malay; Thai; Turkish; Spanish.

This course provides an understanding of the types, composition, and sources of atmospheric emissions that can result from operational activities in the oil and gas industry.

You will learn about how emissions can impact on the environment, and how companies can manage, control and reduce emissions through compliance with industry legislation and regulation.

Exam The assessment is taken during the course and is within the expected duration.
