

RBSRDL022

Hazard Awareness for Wind Energy

Duration	30 Minutes
Target group	Personnel who will be working in the wind industry or related fields, and will carry out their duties in a wind turbine environment, usually in physical contact with a wind turbine or offshore wind structure. Personnel that perform job functions that have been risk assessed by their employer or workplace, where training according to one or more modules of the BST standard may mitigate the identified risks.
Prerequisites	No prerequisites are required to sit this course.
Objective	LO1: Explain what Hazard Identification is LO2: Identify methods of hazard identification LO3: Describe the different energy sources LO4: Identify examples of control measures for each energy source LO5: Identify contributing factors LO6: Describe how you can use your senses to detect hazards LO7: Explain the importance of good observation
Contents	This course is suitable for all employees working in hazardous industries, including wind energy. It has been developed with the aim of promoting the establishment, maintenance and development of hazard identification and risk assessment systems to provide a safer work environment.
Exam	The assessment is taken during the course and is within the expected duration.
