RelyOn Nutec
360° Safety

Course code	LBSRDL037
Course name	(L-AUS) Low Voltage Work: DS/EN 50110
Duration	135 Minutes
Target group	Working on or near electrical installations.
Prerequisites	No prerequisites are required to sit this course.
Objective	Module 1 - Section 1 – Introduction to Low Voltage Work Under Voltage, L-AUS LO1: Describe the history of safety within the electrical trade industry LO2: Introduce and summarise Low Voltage Work Under Voltage, L-AUS LO3: Explain the legal framework LO4: Outline the objectives of the DS/EN 50110-1:2013 LO5: Identify where the standard applies Section 2 – An Organisation's Responsibilities LO6: Identify who is responsible according to the standard LO7: Explain an organisation's responsibilities for overall planning LO8: Explain an organisation's responsibility for providing training LO9: Define skilled and instructed persons and outline their responsibilities LO10: Explain the meaning of internal management systems LO11: Outline the necessity of conducting risk assessments Section 3 – Common Electrical Hazards and Safety Equipment LO12: Describe injuries that can be caused by common electrical hazards LO13: Identify the purpose of different types of personal protective equipment LO14: Outline and describe the different categories of hand tools suitable for working within electrical installations LO15: Describe the purpose of protection against adjacent live parts Section 4 – Measuring Instruments LO16: Explain the purpose of measuring instruments, and identify the benefits of different types LO17: Explain the safety features of multimeters LO18: Describe the purpose of safety categories and where different categories of measuring instruments can typically be used LO19: Identify risks associated with the practical use of measuring instruments LO20: Explain the benefits and risks of the hold function Section 5 – When Accidents Happen LO21: Explain the importance of knowing first aid LO22: Identify when to carry out CPR LO23: Describe the purpose of defibrillators and how they work LO24: Explain how to place someone in the recovery position LO25: Explain how rescue sticks work LO26: Explain how lifelines work LO27: Identify the correct procedure for reporting accidents Module 2 - Section 1 – Roles and Responsibilities LO1: Outline the role and responsibilities of the Operations Manager LO2: Outline the role and responsibilities of the Safety Supervisor Section 2 – Safety at the Worksite LO3: Describe the steps that must be taken before work commences LO4: Identify levels of access for different types of installations and personnel LO5: Explain safety precautions to take when operating fuses LO6: Identify safety precautions to take when working on non-insulated overhead lines Section 3 – Working Methods LO7: Outline the different types of working methods and associated safety measures LO8: Identify the steps that must be taken to remove safety measures LO9: Describe when an installation can be categorised as energised LO10: Outline safety precautions to consider when carrying out maintenance work

Contents	The course is available in the following languages: English; Danish The aim of this course is to you with a detailed explanation of L-AUS requirements and how to work safely when near electrical installations. The course will also focus on the legal framework, organisational responsibilities, common electrical hazards and safety equipment, measuring instruments and what to do when accidents occur. Following completion of this course you will have learned and have an understanding of low voltage level electrical installations. You will also be able to show an understnading of the safety-related aspects, carry out risk assessment and use and inspect both suitable tools as well as personal protective equipment. This course will give you the necessary trianing to work with dead installations, live installations and in the vicinity of live installations. In addition, the course includes a basic knowledge of first aid in relation to electrical installations. This course is designed in accordance to the European standard EN 50110.
Exam	The assessment is taken during the course and is within the expected duration.
